The handle with the wooden baluster should be protected against rain and sun by inserting the door in recesses or using a roof above the door mounted in straight walls. The roof should shade the handle with the baluster at noon in the summer. It is recommended to carry out periodic care: 2-3 times a year. After wiping with a soft cloth moistened with water, protect the painting surface with a wood care agent (alkaline or solvent agents cannot be used for maintenance).

If the door does not have the required roofing, the handle will not be covered by the warranty.

During external and internal works of the building, the handle should be protected against dirt.

The handle with the wooden baluster should be protected against rain and sun by inserting the door in recesses or using a roof above the door mounted in straight walls. The roof should shade the handle with the baluster at noon in the summer.

It is recommended to carry out periodic care: 2-3 times a year. After wiping with a soft cloth moistened with water, protect the painting surface with a wood care agent (alkaline or solvent agents cannot be used for maintenance).

If the door does not have the required roofing, the handle will not be covered by the warranty.

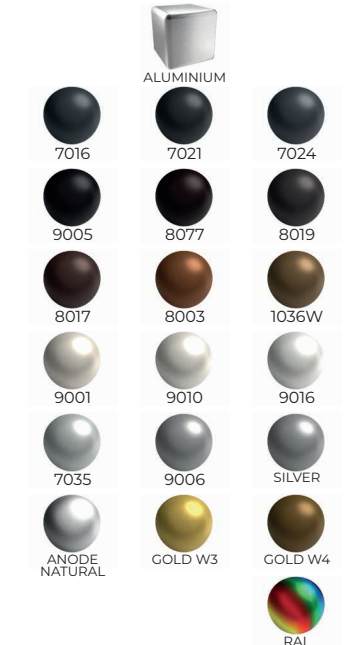

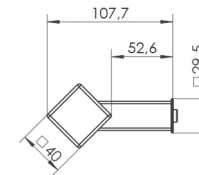

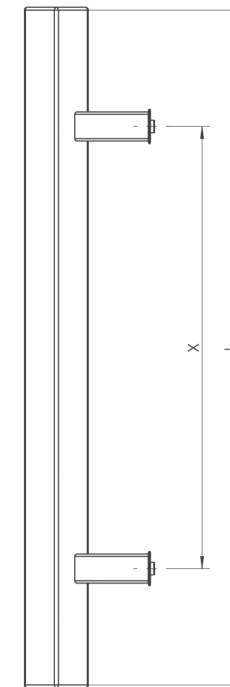

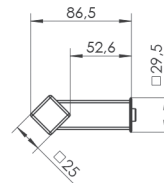

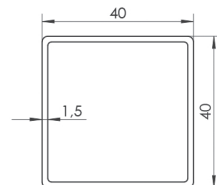

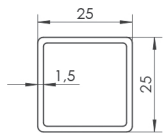

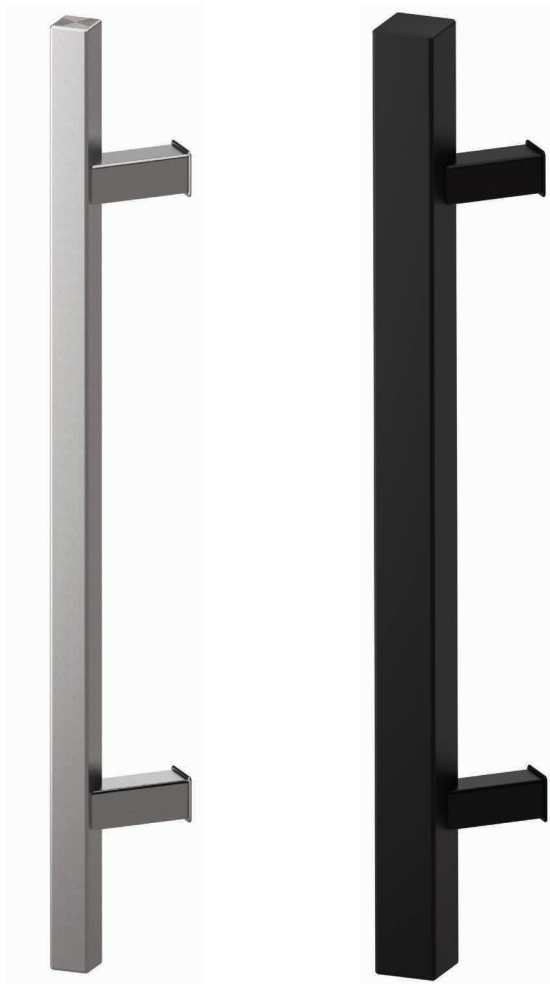

During external and internal works of the building, the handle should be protected against dirt.

For L > 600 and L ≤ 1200, 1 additional mounting included.
 For L > 1200, 2 additional mountings included.
 In the above cases, a symmetrical arrangement of the additional mountings is recommended; however, the installation method allows for their free positioning in relation to the length of the extension.
